TROX CO₂OLdesk FACES FIRST TEST AT JPMorgan OFFICES

TROX AITCS is working with global investment bank JPMorgan to design, manufacture, install and commission the award winning CO₂OLdesk carbon dioxide-based dealer desk cooling system at its offices in 100 Wood Street, London.

This unique system comprises a CO₂ heat exchanger that absorbs the PC heat within the desk chamber ensuring not only a comfortable working environment but also safe guarding the vital computer hardware.

TROX AITCS's Guy Hutchins, sales director, said: "Once the installation at Wood Street is up and running we are very confident that JPMorgan will adopt CO₂OLdesk as their preferred trading floor cooling solution; we think that they will want to take advantage of its high capacity, low energy and low carbon footprint, along with its optimum comfort credentials."

The first units will be installed, by TROX, during May this year and the contract will be completed in August. CO₂OLdesk will provide cooling to the PCs of around 350 traders spread over two floors of the building.
